SIMOREG DC MASTER

Product Data Sheet

RSS70-DCF-40 C98043-A7044-L1-6

Drive electronic circuit board

DRIVE PLATFORM

SIMOREG DC MASTER / 6RA70

Siemens RSS70-DCF-40 C98043-A7044-L1-6 is an electronic circuit-board assembly associated with the SIMOREG DC MASTER drive platform. It is a board-level spare for an installed drive arrangement, not a complete converter with an independently assigned motor-power rating.

01 TECHNICAL DATA

Drive platform	SIMOREG DC MASTER / 6RA70

02 ADDITIONAL PRODUCT DATA

The assembly is identified by the RSS70-DCF-40 board designation and C98043-A7044-L1-6 hardware reference. Its populated circuit board and mating connectors form part of the installed SIMOREG electronics, with the board configuration remaining separate from the power-converter and motor ratings.

03 PRODUCT FUNCTION

Identify the host SIMOREG DC MASTER drive and the installed RSS70-DCF-40 board location before integration. The board reference does not independently define the converter input voltage, motor rating or armature-current capacity.

04 SYSTEM COMPATIBILITY

Map the existing mating connectors and retain their labels and cable routing for the assembly-level comparison. No verified pin-level connection drawing or board supply-current specification is included in this provisional reference, so electrical connections require the host-drive documentation.

05 DOCUMENT BASIS

Technical reference compiled for the exact recorded assembly. Manufacturer documentation is not included.
