Process Manager communication card

HOST	ROLE	INDICATIONS	CONNECTION
Process Manager	**Communication**	**Power / Status**	**Backplane**

Honeywell 51303976-400 is a communication card for the Process Manager control section in legacy TDC 3000 and TPS installations. It is one of the cards forming that control section. The assembly includes a main printed-circuit board, an attached daughterboard and rear backplane connections.

01 TECHNICAL DATA

Control-section role	One of five Process Manager control-section cards
Front indications	Power and Status
Mechanical connection	Rear backplane connectors
Extraction hardware	Upper and lower extractor handles
Assembly arrangement	Main PCB with attached daughterboard

Honeywell 51303976-400 Process Manager communication-card identification and supplied assembly photographs

02 ADDITIONAL PRODUCT DATA

The front panel has Power and Status indications with upper and lower extractor handles. The complete 51303976-400 identity and supplied board revision govern spare selection. Electrical ratings, network protocols and universal host compatibility are not assigned from conflicting listings or from the appearance of the backplane connector.

03 PRODUCT FUNCTION

Identify the installed Process Manager position and the complete 51303976-400 assembly before planning maintenance. This is a communication card within the PM control section, not a generic stand-alone Ethernet adapter or an analog I/O card. Match the host configuration and associated card set to the existing installation.

04 SYSTEM COMPATIBILITY

Record the board revision, daughterboard arrangement, backplane connection and front indications while the equipment is in the approved maintenance state. Use the upper and lower extractor hardware as intended for the rack. Avoid stressing the exposed circuit boards or connector contacts during handling.
