YOKOGAWA

PW402 S2 ASS9811AT-05

STYLE S2 POWER SUPPLY MODULE

Yokogawa PW402 S2 ASS9811AT-05 is identified as a Style S2 power supply module in the Yokogawa CENTUM product family. This sheet consolidates the recorded technical values for exact-model identification, purchasing review and controlled maintenance planning.

01 IDENTIFICATION AND FUNCTION

Product class	Power supply module
Base model	PW402
Style	S2
Assembly reference	ASS9811AT-05
Input supply	220 to 240 V AC

Identity note. Match the complete PW402 S2 ASS9811AT-05 marking, connector arrangement, hardware revision and installed configuration before replacement.

02 ADDITIONAL TECHNICAL DATA

Output voltage	5.1 V DC
Output current	20 A
Maximum output power	102 W
Installation format	CENTUM rack module
Cooling method	Fan-cooled

APPLICATION REFERENCE

Industrial manufacturing

Production, processing and maintenance operations requiring verified industrial automation components.

Power and utilities

Power generation, distribution and utility maintenance where exact identity and compatibility are required.

Process operations

Continuous and batch-process facilities using controlled replacement and documented commissioning.

Replacement checks

Record the complete marking, installed position, connectors and surrounding hardware before removal.
