S800 I/O

Product Data Sheet

TB842 3BSE022464R1

Modulebus optical port adapter

COMPATIBLE INTERFACES	CONNECTION ADAPTERS
CI801 and CI840	**TB806 or TB846**

ABB TB842 3BSE022464R1 is a Modulebus optical port for the S800 I/O product family. It provides the optical connection accessory used with the documented CI801 and CI840 interface arrangements.

01 VERIFIED TECHNICAL DATA

Compatible interfaces	CI801 and CI840
Connection adapters	TB806 or TB846

02 ADDITIONAL PRODUCT DATA

The port connects through a TB806 or TB846 adapter, as specified in the ABB product record. Selection therefore depends on the fitted interface and adapter combination, rather than on a generic Ethernet or interchangeable optical-transceiver designation.

03 PRODUCT FUNCTION

Use TB842 with the CI801 or CI840 arrangements identified by ABB. The product record places it in the S800 I/O Modulebus family, so its purpose and mating equipment differ from those of a general network optical transceiver.

04 SYSTEM COMPATIBILITY

Identify the TB806 or TB846 connection adapter in the intended assembly. Match the existing interface and adapter path to the product record before adding the optical port to an S800 I/O installation.

05 MANUFACTURER SOURCE

ABB official documentation: TB842 3BSE022464R1.pdf. Selected source pages: 1, 2.
