ABB S3

Product Data Sheet

DSQC256A 3HAB2211-1

Robot controller system board

CONTROLLER GENERATION	SUPERSEDED BOARD REFERENCE
S3	**3HAA3563-ASA**

ABB DSQC256A 3HAB2211-1 is a system board for the S3 robot-control generation. The assembly belongs to the controller electronics and is supplied as a replacement board rather than as a complete robot controller.

01 TECHNICAL DATA

Controller generation	S3
Superseded board reference	3HAA3563-ASA

02 ADDITIONAL PRODUCT DATA

ABB identifies 3HAB2211-1 as the replacement for 3HAA3563-ASA. The DSQC256A designation and the ABB part number together distinguish this board from other DSQC assemblies; board connectors, fitted components and the installed controller configuration remain specific to the assembly.

03 PRODUCT FUNCTION

The ABB product record assigns DSQC256A to S3 controller equipment. Use that generation identification when locating the board within the controller, and retain the existing board position and connector references during the integration review.

04 SYSTEM COMPATIBILITY

ABB lists the superseded board reference 3HAA3563-ASA for 3HAB2211-1. This cross-reference supports the stated service relationship; it does not establish compatibility with every similarly numbered DSQC board or a different robot-control generation.
