EXPERION C300 PROFIBUS DP

Product Data Sheet

CC-TPOX01 51306528-175

PROFIBUS DP IOTA base

FIELDBUS PROTOCOL	MATING GATEWAY
PROFIBUS DP	**CC-IP0101**

Honeywell CC-TPOX01 51306528-175 is the I/O termination assembly used with the C300 PROFIBUS DP gateway arrangement. It provides the base and termination interface associated with the CC-IP0101 gateway rather than a general analog-input control card.

01 TECHNICAL DATA

Fieldbus protocol	PROFIBUS DP
Mating gateway	CC-IP0101

02 ADDITIONAL PRODUCT DATA

The assembly belongs to the Experion C300 PROFIBUS DP connection path, separating the gateway electronics from their mating termination base. The CC-TPOX01 designation and 51306528-175 reference identify this termination assembly, while CC-IP0101 identifies the associated gateway module.

03 PRODUCT FUNCTION

Locate CC-TPOX01 in the Experion C300 PROFIBUS DP gateway arrangement and identify its mating CC-IP0101 module. The termination assembly and gateway electronics serve different roles and must be considered together when preparing the connection layout.

04 SYSTEM COMPATIBILITY

Retain the installed fieldbus cable labels and identify the actual base connectors before changing the assembly. PROFIBUS DP termination and shielding must follow the installation design; no verified pin-level drawing or terminal-power rating is available in this provisional product reference.

05 DOCUMENT BASIS

Technical reference compiled for the exact recorded assembly. Manufacturer documentation is not included.
