Power-supply terminal module

COMPATIBLE POWER SUPPLY	POWER-SUPPLY POSITIONS	TERMINAL ARRANGEMENT	ATEX CERTIFICATE
6ES7138-7EA01-0AA0	**1**	**TM-PS-A Standard**	**KEMA 04 ATEX 2242**

Siemens 6ES7193-7DA10-0AA0 is the TM-PS-A Standard terminal module for an ET 200iSP power supply. It provides the mechanical and electrical base for one 6ES7138-7EA01-0AA0 power-supply module within the distributed station.

01 TECHNICAL DATA

Compatible power supply	6ES7138-7EA01-0AA0
Power-supply positions	1
Terminal arrangement	TM-PS-A Standard
ATEX certificate	KEMA 04 ATEX 2242

02 ADDITIONAL PRODUCT DATA

The terminal module is distinct from the removable power-supply electronics. Its assigned power-supply position and approved ET 200iSP arrangement define its use; the terminal base must be paired with the specified power module rather than treated as a universal 24 V supply.

03 PRODUCT FUNCTION

Use the TM-PS-A Standard at the power-supply position in the ET 200iSP assembly. Its documented mating unit is 6ES7138-7EA01-0AA0; the terminal module itself does not replace the power-supply electronics.

04 SYSTEM COMPATIBILITY

Plan the terminal-base sequence together with the interface and electronic modules. Maintain the station bus and the applicable hazardous-area installation requirements of the ET 200iSP manual rather than applying generic DIN-rail power-supply wiring.
