SINAMICS S120

Product Data Sheet

6SL3054-0CG00-1AA0

Licensed CompactFlash firmware card

STORAGE INTERFACE	FIRMWARE RELEASE	PERFORMANCE EXTENSION	LICENSE DOCUMENT
CompactFlash	**V2.6**	**Not included**	**Certificate of License included**

Siemens 6SL3054-0CG00-1AA0 is the licensed CompactFlash card for the SINAMICS S120 drive platform identified with software release V2.6. It supplies the storage and licensing combination specified for the corresponding S120 configuration, rather than functioning as a generic blank memory accessory.

01 TECHNICAL DATA

Storage interface	CompactFlash
Firmware release	V2.6
Performance extension	Not included
License document	Certificate of License included

02 ADDITIONAL PRODUCT DATA

The exact article is the version without performance expansion and includes a Certificate of License. Firmware level and licensed functional scope are therefore part of its identity. Card capacity, extended-function licensing and compatibility with later control-unit generations should not be inferred from other SINAMICS memory-card variants.

03 PRODUCT FUNCTION

Use this CompactFlash article in the S120 configuration that calls for the V2.6 licensed card. Match the control unit and approved software baseline before loading a project, because the order number identifies both a storage format and a software/licensing package.

04 SYSTEM COMPATIBILITY

Keep the Certificate of License with the drive project and equipment records. This article excludes performance expansion, so a project requiring that additional scope needs the corresponding authorized licensed configuration.
