ABB DRIVE INTERFACE

Product Data Sheet

RINT-5513C

Main circuit interface board

INTERFACE DESIGNATION	ASSEMBLY REFERENCE	FAMILY
RINT main-circuit interface	**64696262**	**ABB drive interface**

ABB RINT-5513C is a main-circuit interface board used as a service component in a compatible ABB drive assembly. The RINT-5513C board identifier and the associated 64696262 assembly reference distinguish the board from other drive interface and control components.

01 TECHNICAL DATA

Interface designation	RINT main-circuit interface
Assembly reference	64696262

Verified ABB RINT-5513C board identification and 64696262 assembly reference

02 ADDITIONAL PRODUCT DATA

The supplied board must be matched to the installed drive and its circuit-board marking, connector layout and assembly revision. RINT-5513C is a board-level spare rather than a complete drive, and a drive-level mains voltage, motor current or power rating cannot be assigned to the board without the applicable assembly documentation.

03 PRODUCT FUNCTION

Integrate RINT-5513C only after matching the installed ABB drive and its original board markings. The available evidence identifies a main-circuit interface board associated with assembly reference 64696262; compatibility still depends on the actual drive and assembly version.

04 SYSTEM COMPATIBILITY

Keep the connector assignments, mounting arrangement and associated board references recorded before disconnection. Do not transfer the electrical ratings of a complete drive to this interface board or substitute a similar RINT family number without an assembly-level comparison.

05 REFERENCE

Verified ABB RINT-5513C board identification and 64696262 assembly reference
