SIMOTION D410-2

Product Data Sheet

6AU1400-1PA23-0AA0-Z

1 GB SIMOTION D410-2 CompactFlash Card

STORAGE FORMAT	STORAGE CAPACITY	CONTROLLER COMPATIBILITY	DRIVE SOFTWARE FAMILY
CompactFlash	**1 GB**	**SIMOTION D410-2**	**SINAMICS V5.x**

Siemens 6AU1400-1PA23-0AA0-Z is a 1 GB CompactFlash card configuration for SIMOTION D410-2. The base card carries the SIMOTION Kernel and SINAMICS V5.x drive software used by that controller family. It is not the card variant for the earlier D410, D4x5 or D4x5-2 controllers.

01 TECHNICAL DATA

Storage format	CompactFlash
Storage capacity	1 GB
Controller compatibility	SIMOTION D410-2
Drive software family	SINAMICS V5.x
Controller runtime	SIMOTION Kernel
License-key assignment	Bound to the CompactFlash card serial number

Siemens SIMOTION D410-2 operating instructions, CompactFlash card and licensing sections. The -Z options require the act

02 ADDITIONAL PRODUCT DATA

SIMOTION runtime licenses are assigned to the CompactFlash card serial number through the license key. The terminal -Z identifies an option-bearing order and does not, by itself, establish which license options are included. The exact software version and ordered options therefore remain properties of the supplied card configuration.

03 PRODUCT FUNCTION

Use this CompactFlash card with the SIMOTION D410-2 controller family and the corresponding SIMOTION/SINAMICS software combination. Keep the controller-specific card files and boot arrangement intact instead of treating the card as interchangeable generic storage.

04 SYSTEM COMPATIBILITY

Record the card serial number and installed license key when preparing the controller. License assignment follows that serial number, so copying files alone does not establish the same licensed runtime scope on another card.

05 REFERENCE

Siemens SIMOTION D410-2 operating instructions, CompactFlash card and licensing sections. The -Z options require the actual order record.
