MS300 Blank EPROM Memory Module

MEMORY MEDIUM	DELIVERED MEMORY STATE	COMPATIBLE TECHNOLOGY BOARD	PROGRAMMING ADAPTER
EPROM	**Blank**	**T300**	**UP3; 6DD3462-0AB0**

Siemens 6SE7098-0XX84-0AH0 is the blank MS300 EPROM memory module for the T300 technology board in the SIMOVERT MASTERDRIVES arrangement. The manufacturer ordering table distinguishes this empty memory module from the MS320, MS340 and other modules supplied with a predefined technology software package.

01 TECHNICAL DATA

Memory medium	EPROM
Delivered memory state	Blank
Compatible technology board	T300
Programming adapter	UP3; 6DD3462-0AB0
External parallel programmer	PP1X; 6DD1672-0AD0
STRUC tool version for cited workflow	4.2.4 or later

Siemens MASTERDRIVES T300 technology packages, ordering table and Table 1.2.3: blank MS300 and programming components.

02 ADDITIONAL PRODUCT DATA

In the documented software-adaptation workflow, the MS300 is used with a UP3 programming adapter and PP1X external parallel programmer. The cited workflow requires STRUC version 4.2.4 or later. The blank module provides the memory medium for the intended T300 configuration; it does not include a ready-to-run axial-winder or synchronization application.

03 PRODUCT FUNCTION

Identify the T300 technology board and the exact software project to be used before selecting the blank MS300. The manufacturer table separates the empty 6SE7098-0XX84-0AH0 module from preprogrammed standard-package modules. Select the software and documentation appropriate to the intended technology function independently from the memory hardware.

04 SYSTEM COMPATIBILITY

Use the documented UP3 adapter and compatible programmer when preparing the EPROM in the cited STRUC workflow. Retain the verified project, tool version and programmed image as controlled records. The listed minimum STRUC version applies to that workflow and does not establish compatibility with every later project or tool installation.
