SIMOTION C240 MICRO MEMORY CARDS

Product Data Sheet

6AU1720-1KA00-0AA0

Sixty-four-megabyte motion memory card

STORAGE CAPACITY	SUPPORTED CONTROLLERS	MEMORY MEDIUM	OPTIONAL RUNTIME LICENSING
64 Mbyte	**SIMOTION C240 and C240 PN**	**Micro Memory Card (MMC)**	**Preinstalled functions require additional order options**

Siemens 6AU1720-1KA00-0AA0 is a 64 Mbyte Micro Memory Card for the SIMOTION C240 and C240 PN motion-controller family. The removable medium belongs to the documented SIMOTION C memory arrangement and is distinct from the CompactFlash cards used by SIMOTION D controllers.

01 TECHNICAL DATA

Storage capacity	64 Mbyte
Supported controllers	SIMOTION C240 and C240 PN
Memory medium	Micro Memory Card (MMC)
Optional runtime licensing	Preinstalled functions require additional order options

Siemens PM 21 Catalog 2017, SIMOTION C240 memory-card ordering and runtime-license ordering, pages 2/50 and 2/68.

02 ADDITIONAL PRODUCT DATA

The base article identifies the 64 Mbyte card. The Siemens catalog lists preinstalled runtime functions through additional order options, including a separate MultiAxes package option. The base reference alone therefore does not identify an M24 license or a customer project, and the controller software configuration determines the content used on the card.

03 PRODUCT FUNCTION

Use the 64 Mbyte MMC in the documented SIMOTION C240 or C240 PN arrangement. Match the controller firmware, bootloader and project release before preparing the card; SIMOTION D CompactFlash media have a different role.

04 SYSTEM COMPATIBILITY

Preserve the original project and required runtime-license information outside the card. The base 0AA0 reference does not establish that an additional MultiAxes option has been ordered or activated.

05 REFERENCE

Siemens PM 21 Catalog 2017, SIMOTION C240 memory-card ordering and runtime-license ordering, pages 2/50 and 2/68.
