

## HD22005-3A & HD11010-3A Rectifier Modules

### Product Features

- 5A@220Vdc or 10A@110Vdc output
- Wide voltage input range (323 ~ 475V) and strong adaptability
- With soft-switching technology used, the rectifiers feature high efficiency and good compatibility
- With step-less current limiting used, the rectifiers feature high precision battery charge current limiting
- Built-in CPU distributed control, the rectifiers feature strong anti-interference capability
- Perfect protection and warning measures, providing "four remote" functions
- In accordance with the national safety standard COC

HD22005-3A

### Description

HD22005-3A and HD11010-3A rectifiers, using the advanced power technology and process, is designed for the DC systems in various transformer substations, hydropower plants, power plants and other DC power supply application. It features high efficiency, high power density, high reliability, intelligent control and aesthetic appearance.
