Siemens MICROMASTER 6SL3351-6FE32-1AA1 is a MICROMASTER control interface board for the MICROMASTER 440 chassis drives. The values below are limited to the exact documented article.

01

VERIFIED TECHNICAL DATA

Component Class	MICROMASTER control interface board
Drive Family	MICROMASTER 440 chassis drives
Primary Function	Connects drive logic to the compact power-stage assembly
Power Architecture	Low-voltage CIB electronics
Voltage Class	200–240 V AC class
Current Rating	210 A drive class
Power Section	Chassis power section
Mechanical Design	Plug-in CIB assembly
Electrical Interface	Gate, feedback and auxiliary plugs
Commissioning Check	Verify CIB suffix and all gate channels

- Apply the 210 A power control: Use 6SL3351-6FE32-1AA1 to connect drive logic to the compact power-stage assembly within the documented MICROMASTER 440 chassis drives. Confirm the chassis power section, electrical class and controlled system drawing before work.
- Prepare the gate connector mapping: Record gate, feedback and auxiliary plugs, adjacent assemblies, cable routing, protective earth and configuration data. Preserve the exact 210 A low-voltage CIB arrangement during replacement.
- Complete the low-voltage CIB test: Verify CIB suffix and all gate channels. Review Siemens diagnostics and record the final 210 A low-voltage CIB result before returning the affected function to service.

Match 6SL3351-6FE32-1AA1 to the installed MICROMASTER 440 chassis drives, complete wiring, mating hardware, revision and approved configuration. A similar article number does not establish direct interchangeability.
