

MANUFACTURER DOCUMENT PACKAGE

# Manufacturer's Manual

Reference package for procurement and maintenance review

ACS 580

## CCU-24-H 3AXD50000018771

24 V CONTROL UNIT

Used with the applicable ABB drive control units configuration.

REFERENCE PACKAGE

OFFICIAL DOCUMENT

Selected official manufacturer pages follow this cover.

|------------------------------------------------------------------------------------|-----|
| Layout .....                                                                       | 136 |
| Default I/O connection diagram .....                                               | 137 |
| Default I/O connection diagram .....                                               | 137 |
| Switches .....                                                                     | 139 |
| Additional information on I/O connections .....                                    | 139 |
| PNP configuration for digital inputs (X2 & X3) .....                               | 139 |
| NPN configuration for digital inputs (X2 & X3) .....                               | 140 |
| Connection for obtaining 0...10 V from analog output 2 (AO2) .....                 | 140 |
| Connection examples of two-wire and three-wire sensors to analog input (AI2) ..... | 140 |
| DI5 as frequency input .....                                                       | 141 |
| DI6 as PTC input .....                                                             | 141 |
| AI1 and AI2 as Pt100, Pt1000, Ni1000, KTY83 and KTY84 sensor inputs (X1) .....     | 141 |
| Safe torque off (X4) .....                                                         | 142 |
| Technical data .....                                                               | 142 |

## 12 External control unit (option +P906)

|                                                       |     |
|-------------------------------------------------------|-----|
| Contents of this chapter .....                        | 147 |
| Product overview .....                                | 147 |
| Layout .....                                          | 148 |
| Cables .....                                          | 149 |
| Unpacking the delivery .....                          | 150 |
| Installing the control unit .....                     | 151 |
| Installation procedure .....                          | 151 |
| Connecting the control unit to the drive module ..... | 155 |
| Dimension drawing .....                               | 158 |

## 13 Installation checklist

|                                |     |
|--------------------------------|-----|
| Contents of this chapter ..... | 159 |
| Checklist .....                | 159 |

## 14 Start-up

|                                |     |
|--------------------------------|-----|
| Contents of this chapter ..... | 161 |
| Reforming the capacitors ..... | 161 |
| Start-up procedure .....       | 161 |

## 15 Fault tracing

|                                  |     |
|----------------------------------|-----|
| Contents of this chapter .....   | 163 |
| LEDs .....                       | 163 |
| Warning and fault messages ..... | 163 |

## 16 Maintenance

|                                                            |     |
|------------------------------------------------------------|-----|
| Contents of this chapter .....                             | 165 |
| Maintenance intervals .....                                | 165 |
| Description of symbols .....                               | 165 |
| Cabinet .....                                              | 167 |
| Cleaning the interior of the cabinet .....                 | 167 |
| Heatsink .....                                             | 168 |
| Cleaning the interior of the heatsink .....                | 168 |
| Fans .....                                                 | 169 |
| Replacing the circuit board compartment cooling fans ..... | 169 |

|                                                    |     |
|----------------------------------------------------|-----|
| Replacing the main cooling fans .....              | 170 |
| Replacing the drive module .....                   | 171 |
| Replacing the drive module with option +H381 ..... | 173 |
| Functional safety components .....                 | 175 |
| Capacitors .....                                   | 176 |
| Reforming the capacitors .....                     | 176 |
| Control panel .....                                | 176 |

## 17 Technical data

|                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------|-----|
| Contents of this chapter .....                                                                                  | 177 |
| Electrical ratings .....                                                                                        | 177 |
| IEC ratings .....                                                                                               | 177 |
| UL (NEC) ratings .....                                                                                          | 178 |
| Definitions .....                                                                                               | 178 |
| Output derating .....                                                                                           | 179 |
| When is derating necessary? .....                                                                               | 179 |
| Surrounding air temperature derating .....                                                                      | 180 |
| Altitude derating .....                                                                                         | 181 |
| Switching frequency derating .....                                                                              | 181 |
| Fuses (IEC) .....                                                                                               | 182 |
| Calculating the short-circuit current of the installation .....                                                 | 183 |
| Fuses (UL) .....                                                                                                | 184 |
| Circuit breakers (IEC) .....                                                                                    | 184 |
| Dimensions, weights and free space requirements .....                                                           | 185 |
| Losses, cooling data and noise .....                                                                            | 187 |
| Terminal and entry data for the power cables .....                                                              | 187 |
| Drive modules without output cable connection terminals (+0H371) and with a<br>common mode filter (+E208) ..... | 187 |
| Drive modules with optional cabling panels (+H381) .....                                                        | 187 |
| Typical power cable sizes .....                                                                                 | 188 |
| Terminal data for the control cables .....                                                                      | 189 |
| Electrical power network specification .....                                                                    | 189 |
| Motor connection data .....                                                                                     | 190 |
| Brake resistor connection data .....                                                                            | 190 |
| DC connection data .....                                                                                        | 190 |
| Control panel type .....                                                                                        | 190 |
| Control unit data .....                                                                                         | 190 |
| Efficiency .....                                                                                                | 190 |
| Energy efficiency data (ecodesign) .....                                                                        | 191 |
| Protection classes for module .....                                                                             | 191 |
| Ambient conditions .....                                                                                        | 191 |
| Colors .....                                                                                                    | 192 |
| Materials .....                                                                                                 | 192 |
| Drive module .....                                                                                              | 192 |
| Package materials for module products .....                                                                     | 192 |
| Package materials for options, accessories and spare parts .....                                                | 193 |
| Materials of manuals .....                                                                                      | 193 |
| Disposal .....                                                                                                  | 193 |
| Applicable standards .....                                                                                      | 193 |
| Markings .....                                                                                                  | 194 |
| EMC compliance (IEC/EN 61800-3) .....                                                                           | 195 |
| Definitions .....                                                                                               | 195 |

|                                          |     |
|------------------------------------------|-----|
| Cable types and lengths .....            | 227 |
| Grounding of protective shields .....    | 227 |
| Operation principle .....                | 228 |
| Start-up including validation test ..... | 229 |

| Declarations of conformity .....         | 239 |

## 21 Resistor braking

|                                                              |     |
|--------------------------------------------------------------|-----|
| Contents of this chapter .....                               | 241 |
| When is resistor braking necessary? .....                    | 241 |
| Operation principle and hardware description .....           | 241 |
| Planning the braking system .....                            | 241 |
| Generic guidelines .....                                     | 241 |
| Resistor cables .....                                        | 242 |
| Resistor thermal switch .....                                | 242 |
| Protecting the system against thermal overload .....         | 242 |
| EMC compliance of the complete installation .....            | 243 |
| Placing the brake resistors .....                            | 243 |
| Protecting the system in fault situations .....              | 243 |
| Selecting the default brake system components .....          | 243 |
| Calculation example .....                                    | 243 |
| Selecting a custom brake resistor .....                      | 244 |
| Mechanical installation of resistors .....                   | 245 |
| Electrical installation .....                                | 245 |
| Measuring the insulation of the brake resistor circuit ..... | 245 |
| Connection diagram .....                                     | 245 |
| Connection procedure .....                                   | 245 |
| Start-up .....                                               | 245 |
| Parameter settings .....                                     | 246 |
| Technical data .....                                         | 246 |
| Ratings .....                                                | 246 |
