VersaMax 12/24VDC 0.5Amp Positive Logic Output Module

October 2008

GFK-2537

Discrete output modules IC200MDL740 and BXI00D1624 provide one group of 16 discrete outputs.

Discrete output modules IC200MDL750 (shown below) and BXI00D3224 provide two groups of 16 discrete outputs.

The outputs are positive or sourcing type outputs. They switch the loads to the positive side of the DC supply and thus supply current to the loads.

Note: 12V output functionality requires module version -B or higher.

An external DC power supply must be provided to switch power to the loads.

Intelligent processing for this module is performed by the CPU or NIU.

LED Indicators

Individual green LEDs indicate the on/off state of the output points. Operation of these LEDs is dependent on field power but independent of load conditions.

The green FLD PWR LED is on when field power is applied to the module.

The green OK LED is on when backplane power is present to the module.

Preinstallation Check

Carefully inspect all shipping containers for damage. If any equipment is damaged, notify the delivery service immediately. Save the damaged shipping container for inspection by the delivery service. After unpacking the equipment, record all serial numbers. Save the shipping containers and packing material in case it is necessary to transport or ship any part of the system.

Each group of 16 outputs has a DC+ and a DC- terminal.

When wiring outputs to inductive loads, use of external suppression circuits is recommended. See chapter 2, "Installing Wiring for I/O Devices-Wiring to Inductive Loads" in the *VersaMax I/O System Manual*, GFK-1504, for more information.

For modules IC200MDL740 and BXIOOD1624, if additional bussed terminals are needed, the B terminals can be made available by using a shorting bar. The shorting bar has a maximum current-carrying capacity of 2A per point. See chapter 2 of the *VersaMax I/O System Manual*, for additional information about the shorting bar.

Wiring Connections for Carriers with Two Rows of Terminals

Row B connections are for 32-point modules only.

Wiring Connections for Carriers with Three Rows of Terminals

Side B connections are for 32-point modules only.

Thermal Derating

The number of points that can be on at the same time depends on the ambient temperature, the external voltage, and the orientation of the module and DIN rail. The charts below show example thermal deratings for the modules at 24VDC and 30VDC with the maximum output current per point.
