

MHI D0 CONTROL BOARDS

Product Data Sheet

D0CPU03

processor board

FUNCTION processor board	FAMILY MHI D0 control boards	ORIGIN Japan	WEIGHT 1.05 kg
-----------------------------	---------------------------------	-----------------	-------------------

Mitsubishi D0CPU03 is a processor board for the MHI D0 control boards. The values below are limited to the exact documented article.

01

VERIFIED TECHNICAL DATA

Board Revision	D0CPU03-01
Clock Frequency	64 MHz
Reference Test Point	TP4 GND
Logic Test Point	TP6 5 V
Program Memory Devices	Four labeled EPROMs
Oscillator Type	Toyocom 711SHC
Main Board Role	CPU processing
Connector Style	Backplane plug-in card

- Plant controller processor racks: Controller Processing Systems
- Unit control processor cabinets: Process Controller Systems
- Machine control processor racks: Machine Controller Systems

Match D0CPU03 to the installed MHI D0 control boards, complete wiring, mating hardware, revision and approved configuration. A similar article number does not establish direct interchangeability.
