

PACSYSTEMS RX3i MOTION CONTROL

Product Data Sheet

IC695PMM335-AG

PACMotion multi-axis motion controller

FUNCTION	FAMILY	ORIGIN	WEIGHT
PACMotion multi-axis motion controller	PACSystems RX3i motion control	United States	1.20 kg

GE PACSystems RX3i IC695PMM335-AG is a PACMotion multi-axis motion controller for the PACSystems RX3i motion control. The values below are limited to the exact documented article.

01

VERIFIED TECHNICAL DATA

Controlled Axes	Up to 4 servo axes
Axis Interface	Digital servo bus
Position Units	User-configurable engineering units
Motion Buffer	Queued motion commands
Synchronization	Electronic gearing and camming
Programming	PACSystems motion function blocks
Backplane	RX3i PCI bus
Diagnostics	Per-axis status and fault reporting

- Refinery separation and storage areas: Drive Coordination Systems
- Solvent recovery and dosing rooms: Quality Inspection Systems
- Sterile filling and packaging cells: Process Control Systems

Match IC695PMM335-AG to the installed PACSystems RX3i motion control, complete wiring, mating hardware, revision and approved configuration. A similar article number does not establish direct interchangeability.
