TECHNICAL NOTE

Drive Services

New improved long-life fans for LV AC drives

Long-life fans were developed based on customers requirement of a longer fan change interval.

It is recommended to replace long-life fan every 9 years, in accordance to drive's specific preventive maintenance schedule.

—
The improved fans are specified with a type code and long-life marking.

Fans in LV AC drives

A fan in a low voltage AC drive ensures cooling in a drive unit. Optimum cooling means that operational capability and reliability can be guaranteed. The cooling ability of a fan decreases when components like bearings begin to wear out.

Eco-friendly and compliant

ABB follows relevant standards and introduces solutions accordingly. ABB only uses eco-friendly ErP-approved fans in its LV AC drives in order to help drive owners reduce their energy costs and carbon footprint without incurring excessive costs.

Specification

The improved fans are specified with a type code and long-life marking. The fans are specified for an operational point with the L10 bearing life principle and an ambient temperature of 35 °C.

Preventive Maintenance schedule

It is recommended to replace long-life fan every nine years after its installation, in accordance to drive's specific preventive maintenance schedule.

The replacement of new long-life fan is done along with other components' scheduled replacements, thus the frequency of components' replacement actions is reduced throughout a drive's lifetime.

ABB's Preventive Maintenance (PM) schedules provide detailed guidelines to replace wearing components proactively and avoid unplanned shutdowns. Now in these PM schedules it is possible to find specified maintenance tasks for long-life fans.

Product families

The improved fans can be implemented in the following product families:

- ACSM1
- ACS580
- ACS800
- ACQ810
- ACS850
- ACS880
- ACS600
